Thanks for all the fish.

Abstract

This is a thesis skeleton written with quarto. Make a copy of this thesis repo and start to write!

Make a new paragraph by leaving a blank line.

Table of contents

Acknowledgements	1
Abstract	3
1 Introduction	7
2 Carbon Nanotube and Graphene Field-Effect Transistors	9
2.1 Device Functionalisation	9
2.2 Insect Odorant Receptors	9
3 Carbon Nanotube and Graphene Field-Effect Transistors as Biosensor Platforms	11
4 Fabrication	13
5 Functionalisation of Carbon Nanotubes and Graphene with Odorant Receptors	15
5.1 Linker molecules	15
5.1.1 1-Pyrenebutanoic acid N-hydroxysuccinimide ester (PBASE) . . .	15
6 Results	17
7 Results	19
8 Summary	21
References	23

1 Introduction

This is a book created from markdown and executable code.

See **knuth84?** for additional discussion of literate programming.

[1] 2

2 Carbon Nanotube and Graphene Field-Effect Transistors

2.1 Device Functionalisation

2.2 Insect Odorant Receptors

3 Carbon Nanotube and Graphene Field-Effect Transistors as Biosensor Platforms

4 Fabrication

Stuff I did to get the results.

5 Functionalisation of Carbon Nanotubes and Graphene with Odorant Receptors

5.1 Linker molecules

5.1.1 1-Pyrenebutanoic acid N-hydroxysuccinimide ester (PBASE)

1-Pyrenebutanoic acid N-hydroxysuccinimide ester (also known as 1-Pyrenebutyric acid N-hydroxysuccinimide ester, PBASE, PyBASE, PBSE, PANHS) is an aromatic molecule commonly used for tethering biomolecules to the carbon rings of graphene and carbon nanotubes. The use of this bifunctional molecule for noncovalent functionalisation of proteins onto a single-walled carbon nanotube was first reported in 2001 by Chen *et al.* [1]. Two methods for protein functionalisation were successfully used, with the only differences being the solvent used to dissolve the PBASE powder (DMF, methanol) and the final concentration of the resulting solutions (6 mM, 1 mM respectively). The lower concentration may have been used for PBASE in methanol as PBASE appears to dissolve poorly at higher concentrations.

We purchased PBASE from two suppliers, Sigma-Aldrich and Setareh Biotech. Sigma recommends DMF and methanol as suitable solvents for dissolving PBASE alongside chloroform and DMSO. Setareh Biotech indicates methanol can be used as a solvent. The two suppliers have conflicting information for suitable storage of PBASE, with Sigma recommending room temperature storage while Setareh Biotech recommends -5 to -30°C .

6 Results

What I found out.
